

Cedrik Aagaard

/ Senior Software Engineer

Cedrik Aagaard is a full-stack software engineer who served as sole engineer and technical owner for a publicly launched product. He led architecture and implementation across TypeScript, React Native and backend systems, owning product planning, data ingestion, authentication, payments, analytics and deployment. Prior experience includes frontend and product development for Apple-internal tools and web applications built with React, .NET, Laravel and AngularJS, with a consistent focus on reliable system design and end-to-end delivery.

/ Highlighted assignments

CTO / Lead Engineer

Travat

Jan 2024 - Jul 2026

As Travat's CTO, principal engineer and technical strategist, he transformed complex racing and betting data into a reliable, easy-to-use product for Swedish users. He built smart AI features that turn free-text notes and statistics into clear insights and win-probability estimates, while optimising speed and cost. His technical solution spans React Native, Hono, Prisma, PostgreSQL, Supabase Auth, Stripe, Firebase Analytics and Render, supported by robust APIs, automated data imports and operational tools. He also led technical planning, priorities, stakeholder demos and product delivery from concept to launch.

Software Engineer

Estable AB

Apr 2023 - Dec 2023

Built features and fixes in a .NET/C# microservice backend. Modernized a legacy React frontend built with class components and pre-hooks patterns, and continued feature development in the existing product. Implemented Stripe payment flows, including webhook handling and keeping order state in sync with Stripe's events. Participated in planning, coordination and handover around product changes.

Modernized a legacy React frontend built with class components and pre-hooks patterns, and continued feature development in the existing product. Implemented Stripe payment flows, including webhook handling and keeping order state in sync with Stripe's events. Participated in planning, coordination and handover around product changes. Backend Developer

Apple

Lead Engineer

Aug 2021 - Apr 2023

Built frontend interfaces for Apple-internal tools using Node, React, TypeScript and Blueprint.js. Collaborated with Apple-internal stakeholders in an NDA-covered environment.

Divine Robot

Software Engineer

Sep 2020 - Aug 2021

Fullstack work on a planning platform for paratransit services, covering passenger data, travel rules and booking requests. The platform fed a separate routing service that ran nightly planning jobs. Built and maintained features in a large legacy Laravel and AngularJS codebase. Worked with planning and coordination around customer-facing requirements.

Atlas Fastighetssystem

Software Engineer

Jan 2020 - Dec 2020

Built frontend features for a real-estate management platform. Contributed to planning, demos and customer/stakeholder feedback during the project.

Skillfully Øresund

Fullstack Engineer

Jan 2018 - Sep 2020

Delivered client projects alongside studies at Lund University. Worked directly with customers on requirements, implementation and delivery. Built a React web app and Android app for Finn Medicinen, a healthcare product for medication tracking. Integrated the Android app with a physical Bluetooth button used by patients to log medication intake. Delivered smaller development work for q2d Solutions and Divine Robot.
