

Hesam Rasouli

/ Senior Software Engineer

Senior Software Engineer with 11+ years as a full-stack developer and system architect, experienced in designing and delivering large-scale, cloud-ready systems across diverse technology stacks. Combines deep technical ownership with pragmatic architecture: scalable microservices, resilient integrations, and performance-focused implementations. Adept at translating business needs into maintainable solutions, mentoring peers, and driving complex technical projects from concept to production. Passionate about solving difficult problems and continuous improvement.

/ Highlighted assignments

Senior Software Engineer

IKEA

Apr 2025 - Apr 2026

Delivered modern and sophisticated solutions and ideas that improved system performance and scalability, reduced costs, and optimised business and ways-of-working processes, which led to faster delivery and higher impact.

Senior Software Engineer

IKEA

Sept 2022 - Jan 2025

Hesam was part of a team that improved performance, stability, and scalability of IKEA's Kitchen Planner Range Management System (RMS) by selecting appropriate tools, optimizing resources, and tailoring system architecture. I also developed business-critical RMS features that enhanced the Kitchen Planner experience for end users and improved efficiency for IKEA's internal range management teams.

/ Relevant projects and assignments

IKEA

Senior Software Engineer

Jul 2026 - Dec 2026

- Implemented core back-end functionalities for IKEA M&CP hub platform so the users (IKEA store planners at IKEA stores) can work more efficiently with much reduced costs in the used platforms (Revit, Azure, etc).
- Improved existing features' performance, scalability and testability which led to a better with cleaner code base with better performance and reliability.

Microsoft Azure, NodeJS, TypeScript, PostgreSQL, OpenSearch (Elasticsearch)

KnowIT - AI innovation factory

Senior Software Engineer

Jun 2026 - Jul 2026

Implemented a cross-platform (Android, ios and web) conference rating system from scratch with AI, vibe coding and spec-driven development techniques without writing a single line of code.

Flutter, React, vibe coding, Spec Driven Development

IKEA

Senior Software Engineer

Apr 2025 - Apr 2026

Delivered modern and sophisticated solutions and ideas that improved system performance and scalability, reduced costs, and optimised business and ways-of-working processes, which led to faster delivery and higher impact.

MongoDB, NodeJS, Redis, Microservices, TypeScript, GraphQL, Serverless, Terraform, React, GCP, GitHub Actions, Large Language Models (LLM)

IKEA

Senior Software Engineer

Sept 2022 - Jan 2025

- Made a big impact on performance tuning, stability and scalability of IKEA kitchen planner range management system (RMS) by using the correct tools, utilising the resources and tailoring the architecture.
- Developed crucial features to RMS which made IKEA kitchen planner a better and smarter product for the end-users as well as IKEA internal operators (rangers).

MySQL, JavaScript, AWS, NodeJS, Redis, Microservices, Event Driven Architecture, TypeScript, Elasticsearch, Performance Tuning, REST APIs, Business needs, Amazon Relational Database Service, DynamoDB, Serverless, React, Scalability, GitHub Actions, OpenSearch (Elasticsearch)

Blocket

Senior Software Engineer

Mar 2022 - Jun 2022

- Short-term assignment aiming to improve and boost Blocket's search experience.
- Implemented lots of enhancement and new back-end features that improved search relevance and accuracy up to 70% which ultimately led to much better user experience, much more accurate search results and better search functionality overall.

AWS, Redis, Docker, Microservices, Golang, Elasticsearch, Performance Tuning, REST APIs, Business needs, TravisCI, OpenSearch (Elasticsearch)

Tecnotree

Lead Software Engineer (full-stack developer)

Nov 2019 - Feb 2022

- Coached and mentored other developers (mostly juniors) constantly to make sure they're aligned with the team.
- Developed core and framework-level features as well as crucial and significant business features into DCLM (Digital Customer Lifecycle Management) project which led to a more mature product aligning much more with our customers' needs.

JavaScript, Java, Jenkins, Mentorskap/Coach, MongoDB, Redis, Docker, Microservices, Event Driven Architecture, TypeScript, Spring Boot, Elasticsearch, Java SE, Performance Tuning, REST APIs, Logstash, Business needs, Kubernetes, Rancher, React, Logstash / Kibana, Cloud Native, Scalability, Customer Lifecycle Management, NestJS, Domain-Driven Design (DDD)

Asan Pardakht

Senior Back-End Developer

Jul 2018 - Aug 2019

- Migrated existing monolithic application from .Net framework to our new micro-service and event-driven platform .Net Core based on CQRS and Domain Driven Design which facilitated organisational growth and provided a high level of scalability and extensibility while the number of users were growing rapidly and business needs were changing constantly.
- Designed and developed some crucial parts of the framework such as service bus, search service, etc.

SQL Server, Entity Framework, Redis, Docker, Microservices, Elasticsearch, Performance Tuning, CQRS, Business needs, .NET Core, Scalability, Domain-Driven Design (DDD), .NET Framework

Digikala.com

Senior Back-End Developer

Dec 2016 - Jul 2018

- Developed and maintained Digistyle (Digikala's fashion sector) mobile app REST APIs from scratch.
- Implemented crucial features such as JWT token, Google SSO login, OTP login, Api versioning and Implemented huge improvements to the existing search services (based on Elasticsearch) and distributed caching layer (Redis) which all together boosted performance, stability and user experience (search experience) of the Digistyle product.

JavaScript, ASP.NET, jQuery, SQL Server, Entity Framework, MVC, Redis, Web API, Docker, ASP.NET Web API, E-commerce, Elasticsearch, Performance Tuning, REST APIs, Open API

IRIB (National Iranian Radio and Television)

Full-stack Developer

Jul 2015 - Nov 2016

Tech skill set: ASP.Net Web API, Javascript, AngularJs, JQuery, Bootstrap, SQL server

- Migrated existing IRIB archive management SPA app (developed by HandleBarJs) to a modern AngularJs SPA framework based on AngularJs best practices.
- Developed some back-end features of the project as well as maintaining the front-end of the project.

JavaScript, jQuery, SQL Server, AngularJS, MVC, ASP.NET Web API, Bootstrap

MyCustomer.ir

Full-stack Developer

Nov 2014 - Apr 2015

Developed web apps (mostly e-commerce) from scratch based on customers' needs as well as maintaining other existing web apps and adding more sophisticated features to our existing in-house CMS app.

JavaScript, ASP.NET, jQuery, SQL Server, Bootstrap, E-commerce, ASP.NET Web Forms

/ Education

B.Sc. Information Technology (IT) Engineering (BSC)

2010 - 2014

Qazvin Azad University (QIAU), Qazvin/Iran (Qazvin)

/ Language skills

English

Native or bilingual proficiency

Swedish

Elementary proficiency
