

Magnus Anvin

/ Senior Software Engineer

Magnus is a senior software engineer with nearly 25 years of experience in software engineering and system integration. He modernises complex legacy systems into microservices and event-driven solutions, combining system design with hands-on development, cloud infrastructure and DevOps. His assignments span Java, Kotlin, TypeScript and Node.js. He combines technical depth with an understanding of business needs and user experience, and values clean, maintainable code and high-quality delivery.

/ Highlighted assignments

Senior Software Engineer / DevOps Engineer

Ingka Digital / IKEA

Mar 2023 - Present

In Goods Movement, Magnus modernises IKEA's store replenishment systems using Kotlin, Spring Boot and Google Cloud. He sets up infrastructure and observability with Terraform and GitHub Actions. He uses AI agents, contributes agent skills to the team's shared library and runs agents autonomously and in parallel in isolated Docker Sandboxes.

Senior Software Engineer

IKEA

Apr 2021 - May 2022

In Sales Order Processing, Magnus designed and implemented microservices for order processing. The team moved selling systems from legacy platforms towards an event-driven architecture using Kotlin, Spring Boot and Axon with CQRS and Event Sourcing.

Techniques

Java / Kotlin
Microservices
Event-driven architecture
REST / OpenAPI
TDD / Scrum / Kanban

Tools

Spring Boot / Cloud
Axon / Kafka / Solace
Terraform / GitHub Actions
GitHub Copilot / Claude Code
Docker Sandboxes
Custom Agent Skills

Products

GCP / AWS
Docker / Kubernetes
Oracle / PostgreSQL
MySQL / MongoDB

/ Relevant projects and assignments

Ingka Digital / IKEA

Senior Software Engineer / DevOps Engineer

Mar 2023 - Present

Goods Movement plans and executes replenishment of sales locations in IKEA stores. Magnus rewrites and moves functionality from a legacy platform to a modern cloud solution. He also sets up Google Cloud infrastructure and monitoring and observability with SignalFx and Grafana using Terraform and GitHub Actions. He also works with AI-assisted development using agents, contributes agent skills to the team's shared skills library and runs agents in isolation with Docker Sandboxes so they can work autonomously and in parallel.

Kotlin, Spring Boot, GCP, GKE, Gateway API, IAM, Cloud DNS, Cloud Armor, Cloud SQL, PostgreSQL, Terraform, GitHub Actions, Cloudflare DNS, SignalFx, Grafana, Solace PubSub+

H & M

Senior Software Engineer

May 2022 - Mar 2023

In Core Engineering, Magnus developed a deployment pipeline that takes application-onboarding requests from ServiceNow and provisions resources on Solace event brokers across the IT landscape. He also helped define ways of working and guardrails for application teams adopting an event-driven architecture.

Solace PubSub+, GitHub Actions, TypeScript, Ansible, Docker, Event-Driven Architecture, ServiceNow

IKEA

Senior Software Engineer

Apr 2021 - May 2022

In Sales Order Processing, Magnus designed and implemented microservices for order processing. The team moved IKEA's selling systems from legacy platforms and frameworks towards an event-driven architecture using microservices, CQRS and Event Sourcing.

Kotlin, Spring Boot, Spring Cloud, Axon Framework/Server, CQRS, Event Sourcing, Google Kubernetes Engine

IKEA

Senior Backend Developer

Jun 2020 - Apr 2021

In Selling API, Magnus helped move order creation from a synchronous, tightly coupled solution to an event-driven architecture. He extracted functionality from a legacy monolith into microservices communicating through Kafka, while preserving the client REST API for a controlled rollout. He also adapted services to use Spring Cloud Stream so the same build could run with either Google Pub/Sub or Solace PubSub+, selected through configuration.

Kotlin, Spring Boot, Spring Cloud, Apache Kafka, Apache Avro, Google Pub/Sub, Solace PubSub+, Spring Cloud Stream, Spring Cloud Config

/ Relevant projects and assignments

IKEA

Senior Backend Developer

Dec 2019 - Jun 2020

In New Kitchen Planner, Magnus developed a content management system for IKEA's range in the kitchen planner. He worked mainly on backend development and also contributed to frontend development.

Node.js, React, AWS, Serverless

IKEA

Senior Backend Developer

Aug 2017 - Dec 2019

Selling API evolved from the backend of the Sälja project into a standalone product serving other IKEA projects. Magnus designed and developed APIs for multiple projects within IKEA.

Java 8-11, Kotlin, HATEOAS/HAL, Spring Boot, Spring Cloud, Hystrix, Microservices, Kubernetes, OpenShift, Azure DevOps CI/CD

IKEA

Senior Backend Developer

Jun 2016 - Aug 2017

Sälja was a pilot for a new sales tool enabling IKEA co-workers to serve customers on the shop floor using tablets. Magnus developed the backend API and its interfaces to several IKEA systems. The backend used REST architecture with multiple microservices.

Java 8, REST, HATEOAS/HAL, Spring Boot, Spring Cloud, Hystrix, Microservices

IKEA

Senior Backend Developer

Jan 2009 - Jun 2016

In iSell, Magnus developed backend functionality for the store sales support system, covering product information, shopping lists and customer orders. He adapted the system for new regions and business processes, designed interfaces for a new web platform and implemented new order flows. He also developed logistics integrations and refactored existing flows to support new business logic.

Java, Spring, JDBC, IBM WebSphere, Tomcat, Eclipse, ClearCase, ClearQuest, UML, JUnit, EasyMock/Mockito, Ant, Ivy, IKEA Framework, Scrum, TDD, Visual Studio, VB.NET

/ Earlier projects and assignments

Various projects and assignments within software engineering at Sony Ericsson, E.ON, Telenor, Tele2 and Telia during May 2002 - Jan 2009.

/ Employment history

Literal Development AB — Senior Consultant / Senior Software Engineer	2012 - Present
LINAF AB — Senior Consultant / System Developer	2011 - 2012
Cybercom Sweden AB — Senior Consultant / System Developer	2005 - 2011
Teleca OSS AB — Consultant / System Developer	2002 - 2005
Cellpoint systems — System Developer	2002

/ Education

Master of Science in Computer Science Lund University	1996 - 2002
---	-------------

/ Courses and Certifications

Functional Programming Principles in Scala	2014
Sun Certified Web Component Developer — Java 2 Platform, Enterprise Edition 1.4	2006
Sun Certified Programmer — Java 2 Platform, Edition 5.0	2005

/ Language skills

Swedish	Native
English	Fluent
French	Basic
