

Björn-Eric Abrahamsson

/ Senior Software Engineer

I am a senior software engineer with a background in design and more than 15 years of experience working across a wide range of digital products. My experience range from small initiatives to international startups and large-scale platforms, spanning fintech, e-commerce and public-facing services.

I am most effective when bridging customer needs with development teams, balancing developer experience, delivery quality, commercial constraints and long-term technical direction.

I am comfortable moving between technical problem-solving and stakeholder-facing discussions, translating complex technical topics for non-technical audiences while maintaining a high standard of engineering practice.

I am driven by learning and building robust solutions that shape meaningful digital experiences.

Assignment: Customer Payments

At Inter IKEA we were tasked with setting up a component library to be used with the customer payment backend. The final project consists of a fully typed platform agnostic component library. It has end to end tests, unit tests and is delivered as a NPM package using continuous delivery.

The components has a shared interface that integrates with multiple payment providers. Communication with the backend is through a companion backend-for-frontend API that is part of the project.

Tetra Pak

Senior Software Engineer

Sept 2023 - Jan 2025

In my work at Tetra Pak, I developed and maintained a service application for packaging machines as part of a cross-functional team. I worked in React with a .NET backend to create robust solutions for machine maintenance and service performance.

Eletive

Senior Software Engineer

Oct 2023 - Sept 2024

Build a workplace where people thrive.

<https://eletive.com>

At Eletive, I helped build a platform to measure and improve the employee experience. My primary focus was building the backend entirely on AWS using PostgreSQL, GraphQL, and TypeScript. I also developed internal tools to shorten the team's feedback loop during development.

Welcom

Senior Software Engineer & Tech Lead

Apr 2020 - Sept 2023

In my role as senior software engineer and tech lead, I have acted as a bridge between the client and the development team. One of my key strengths is understanding customer needs and translating them into technical solutions. My creative side has led to many new revenue-generating concepts, the implementation of new technologies, and strong customer relationships.

I find it easy to communicate with people, which is why part of my work has been focused on mentoring and recruiting colleagues..

Divido, London

Web developer

Oct 2018 - Apr 2020

Back End Developer, Core Services Team

Global SaaS consumer lending platform for financial institutions and multinational retailers that want to rapidly build new revenue streams or defend existing ones, and enhance their product offering through point-of-sale finance.

<https://www.divido.com>

As part of Divido's Core Backend Services Team, I designed and built microservices that served our integrations and frontend teams with APIs via Apollo GraphQL. The microservices were extracted from a larger PHP monolith and were written in Golang and PHP.

FAST2 Affärssystem

Web developer, frontend

Jan 2016 - Sept 2018

As a Frontend Developer at FAST2, I transformed Photoshop or Sketch designs into WordPress pages where the customer themselves managed content updates. The pages were integrated into the larger business system and allowed customers to perform tasks such as reporting issues and applying for housing.

We developed applications both internally and for customers using, among other technologies, Laravel and React.

I had a lot of customer interaction, ranging from conducting training sessions on their new website to developing new functionality and selling new solutions.
