

David Dumitru

/ Senior Software Engineer

David is a self-driven and solution-oriented senior software engineer experience in C#/.NET development. He enjoys building practical, scalable solutions that make a real difference, with a strong focus on clean architecture, maintainability, and readable code.

He has experience with REST APIs, system integrations, SQL, and Entity Framework Core, as well as Windows desktop development using WinForms, WPF, and client-server architecture. David has also worked with modernization of legacy .NET applications and thrives in challenging environments where he can quickly adapt to modern technologies and complex systems. His curiosity, collaborative mindset, and strong critical thinking skills.

/ Highlighted assignments

IKEA

Senior Software Engineer

2025 - 2026

Contributed to backend development for customer profile pages, building integrations with multiple internal platforms & ensuring seamless data synchronization across systems. Maintained & optimized MongoDB database layer, implementing efficient queries & schema updates to support scalable customer data operations. Delivered new features using Test-Driven Development (TDD) & Agentic AI workflows.

AI Innovation Factory

Software engineer

202604 - 202609

AI-Assisted Code Review Initiative for Alfa Laval

Took a leading role in an AI initiative focused on improving software development workflows through AI-assisted code review and structured developer guidelines. Worked with GitHub Copilot instructions and agents, review prompts and AI guardrails to support consistent, secure and maintainable code.

AI-Assisted Code Review Initiative for Alfa Laval

Took a leading role in an AI initiative focused on improving software development workflows through AI-assisted code review and structured developer guidelines. Worked with GitHub Copilot instructions and agents, review prompts and AI guardrails to support consistent, secure and maintainable code.

Contributed to testing local AI-assisted review workflows using IDE plugins and CLI tools, with focus on identifying code quality issues, security risks, missing tests, error handling improvements and API design concerns earlier in the development process.

IKEA

Senior Software Engineer at IKEA

Feb 2025 - Apr 2026

Working within the client's digital delivery organization, I contributed to a core product driving their customer facing pages. Because the client operates within a highly fragmented system landscape, our team was responsible for managing and centralizing a massive portion of the complex business logic required for the customer pages.

Collaborated in an agile, cross-functional team alongside Frontend (FE) and Backend (BE) developers, UX designers, and Business Analysts (BA) to align APIs with user requirements and system architecture.

Developed backend solutions for the customer account management system, building robust integrations with multiple internal platforms to ensure seamless data synchronization.

Maintained and optimized the MongoDB database layer, implementing efficient queries and schema updates to support scalable customer data operations.

Delivered new features utilizing Test-Driven Development (TDD) and Agentic AI workflows, accelerating development cycles while maintaining high code quality through Azure DevOps CI/CD pipelines.

Actively participated in code reviews and refactoring initiatives, leveraging AI tools for code optimization and maintainability across the backend codebase.

AngularJS nopCommerce Azure DevOps Usercentrics MVC 5 ASP.NET

SZU - IT

Senior Software Developer

Jun 2020 - Sept 2021

Led development of high-performance Blazor web solutions integrated with MS SQL Server.

Maintained and enhanced ASP.NET MVC platform, reducing technical debt through systematic refactoring and optimization.

Built RESTful and SOAP web services using .NET, enabling seamless system integrations and API-first architecture.

Provided comprehensive support throughout the software development lifecycle, including customer assistance, debugging, testing, code review, and mentorship of junior developers.

SOAP ASP.NET MVC C# Microsoft SQL Server Razor Pages .NET Blazor

Fimasoft

Software Developer

May 2016 - Jun 2020

Designed and developed ASP.NET MVC web solutions with optimized MS SQL Server stored procedures, handling complex business logic efficiently.

Pioneered the adoption of Blazor for new web projects, leveraging its capabilities to enhance application performance and user experience.

Developed a diverse range of applications across various platforms, including WinForms, UWP, and WPF, integrated with MS SQL Server databases.

Migrated legacy .NET Framework applications to .NET Core, improving deployment speed and cross-platform compatibility.
