

Linus Törnå

/ Senior Software Engineer

Linus is a backend developer experienced in designing and delivering secure, scalable, maintainable solutions with C# and .NET Core. He specializes in microservices and API development, Entity Framework Core, MongoDB, Cosmos DB, and cloud/event-driven integrations like Azure Service Bus, Key Vault, and Application Insights. He has built business-critical systems for customer profile management, e-commerce, checkout, payments, and ERP/payment provider integrations. Focused on quality, security, observability, and performance, Linus translates complex requirements into robust solutions and collaborates methodically to deliver reliable outcomes.

Senior Software Engineer

Knowit Core Syd AB

Jan 2023 - Ongoing

Developed secure, scalable backend microservices for customer profiles, shopping carts, checkout, order validation, and payment processing. Built APIs and integrations with ERP systems and payment providers using C#, .NET Core, EF Core, MongoDB, Cosmos DB, Azure Service Bus, and Key Vault. Improved reliability, security, observability, and performance with Application Insights.

IKEA

Senior Software Engineer

Jan 2023 - Ongoing

Profile Pages

Developing microservices supporting customer profile management, including account details, preferences, and data security. Built APIs with .NET Core and EF Core, ensuring scalable and maintainable data access. Secured sensitive data using Azure Key Vault and designed event-based integrations with Azure Service Bus. Integration with different external application in various ways.

Cart & Checkout

Worked on backend microservices enabling the shopping cart and checkout process. Business logic for order creation, and validation. Communication with an external ERP system. Leveraged C#.NET Core, Entity Framework Core, and MongoDB for persistence. Integrated with Azure Service Bus for event-driven flows and used Azure Key Vault for secure secrets management. Ensured observability and performance monitoring through Application Insights.

Payment

Contributed to backend services for payment processing and stored card handling. Implemented secure tokenized flows and integrations with external payment providers. Built services with C#.NET Core, EF Core, and CosmosDb, ensuring compliance with security standards. Leveraged Azure Key Vault for sensitive credentials, and enabled robust logging and diagnostics via Application Insights.

C#, Azure services, Backend, SQL Database (Azure), Scrum, MongoDB MySQL, comos DB

EDP Consult

Senior Software Engineer

Jan 2005 - Dec 2022

Development of a large windows-based application to manage water and waste for municipalities. I was responsible for writing the parts for invoicing as well as the register for customer, facilities, and services. I also had a leading role in the design and development of a framework for easier and uniform application development within the organization.

Application development, Consult

EDP Consult

Lead software developer

Dec 2015 - Nov 2022

EDP Consult

Joined a recourse team that took on tasks from different parts of the company. I continued to improve our framework with new features and functions that our products requested. I wrote a reset API for logging of user data according to GDPR requirements. I wrote webservices for collection of errors and versions from our applications.

Oct 2012 - Dec 2015

within the organization. A team of 5 developers. We built everything on the .NET framework. Our framework has functions for communication based on WCF, event management, transactions, data fetching and filtering from SQL database. We made our own proxy implementation with IL EMIT to handle exceptions on our server calls.
