

Lykke Axlin
/ Senior Software Engineer

Lykke is a highly skilled and enthusiastic software engineer known for her vast expertise in multiple programming languages such as Java, JavaScript, React, Node, and .NET. Her capability to learn and adapt swiftly to new technologies highlights her exceptional learning agility. Her ability to work collaboratively shines as she consistently seeks input from colleagues to refine her skills and ensure professional growth. Lykke is dedicated to producing top-notch results and excels in environments where teamwork and innovation are prioritized, making her an invaluable asset to any team.

/ Highlighted assignments

Senior Software Engineer

Inter IKEA

Jan 2023 - Ongoing

Lykke is a fullstack developer in an e-commerce project delivering Cart & Checkout solutions for IKEA retailers globally. It integrates APIs for ERP systems, warehouses, payment methods, and product info, tailored to each market's services. The project includes customer-facing pages, is built on Azure with microservices, uses CI/CD workflows, and incorporates advanced technologies.

Senior Software Engineer

Transdev

Aug 2022 - Dec 2022

Lykke developed and designed two React applications—one web, one mobile. The mobile app lets train attendants report entering/exiting passengers at stations; admins use the web app to configure counted stations and approve measurements. I also contributed to the backend using .NET, Entity Framework and a SQL database.

Senior Software Engineer

Jan 2023 - Ongoing

Lykke is a senior software engineer in an e-commerce project where Knowit is responsible for delivering a Cart & Checkout solution to all IKEA's retailers around the world. The product handles API-integration towards ERP-system, warehouse, payment methods and product information system. Every market has its own standardized services to inform of warehouse pick-up points, delivery methods and payment methods. The e-commerce project also handles customer facing pages and log in, favorites and customer journey. The project has fully adopted the CI/CD way of working and is built on Azure platform and microservices using the latest technology in the project.

HTML, JavaScript, CSS, Microsoft Azure, E-commerce, React.js, .NET

Transdev

Senior Software Engineer

Aug 2022 - Dec 2022

Lykke was responsible for the development and the design of two different React applications: one used on the web and one used on the mobile. The purpose of the mobile app is for the train attendant to report the number of entering and exiting passengers at a given station. Admins use the web app to configure what stations are to be counted, approve measurements and so on. Furthermore, I also had a role in the backend development. The techniques used in the backend are .NET and Entity Framework and a SQL database was used.

JavaScript, SQL, Git, C#, Entity Framework, Microsoft SQL Server Management Studio, REST API, React.js, .NET

Axis Communications

Software Engineer Student

Apr 2021 - Dec 2021

Together with another summer worker I developed an open source plugin to Spotify's open source developer platform Backstage. The purpose of the plugin is to make it easier for companies to collaborate on internal projects. The frontend is written in React, the backend is written in NodeJS and a PostgreSQL database was used.

During an internship in the fall, I worked with the deployment of a Backstage instance at Axis together with developers from Axis. The techniques used for the deployment were Docker and Kubernetes.

Git, Node.js, Docker, TypeScript, Kubernetes, PostgreSQL, React.js
