

Mikael Gullstrand

/ Senior Software Engineer

Mikael is a senior software engineer building business-critical systems and cloud solutions. He specializes in backend development with Java and C#, and has deep expertise in cloud platforms, microservices, Kubernetes, CI/CD, and automated testing.

An AWS Certified Solutions Architect and AWS Certified Developer, Mikael pairs certified AWS knowledge with hands-on experience designing, building, and operating solutions on Microsoft Azure.

He works in agile, cross-functional teams and contributes across the full development lifecycle, from cloud architecture and platform setup to development, deployment, and continuous improvement, prioritizing quality, reliability, and business value.

/ Highlighted assignments

IKEA

Senior Software Engineer

2024 - 2026

Mikael was a Senior Software Engineer on a modern Azure-based e-commerce platform of modular monoliths, supporting cart and checkout across Latin America and Southeast Asia. Using REST APIs, Azure SQL, MongoDB and Azure Service Bus, he delivered new features, modernized solutions, shaped platform architecture, and represented the team in cybersecurity to ensure compliance.

Verisure

Senior Software Engineer

2021 - 2022

Mikael worked on the Platform Foundation team supporting Verisure developers with services and libraries to improve developer experience. Responsibilities included maintaining and extending the codebase, adding features such as multi-data-source and transaction support in a Spring Boot database library, and analyzing and presenting solutions for services enabling new business functionality.

IKEA

Senior Software Engineer

Oct 2024 - May 2026

Mikael served as a Senior Software Engineer on a modern Azure-based e-commerce platform built around several modular monoliths. The solution supported cart and checkout capabilities for online purchases across Latin America and Southeast Asia, using REST APIs, Azure SQL, MongoDB, and Azure Service Bus. Mikael delivered new functionality, modernised existing solutions, and contributed to the platform's architectural development. He also represented the team in the cybersecurity initiative, ensuring compliance with established security standards and best practices.

Alfa Laval

Senior Software Engineer & DevOps Champion

Sept 2023 - Oct 2024

Mikael contributed to the development of a product configurator integrated with e-commerce platforms, ERP systems, and other enterprise applications. He supported the platform's functional and technical evolution, including its migration from on-premises infrastructure to Microsoft Azure. As the team's DevOps champion, he implemented infrastructure as code, established release pipelines, and provided DevOps guidance. He also contributed to technical design, planning, and backend development.

Verisure

Senior Software Engineer

Aug 2022 - Aug 2023

In his role as a Senior Software Engineer, he analysed and developed solutions and services for business-critical processes in a new business domain. The REST-based services ran in a Kubernetes cluster and were used globally by Verisure and external parties. As these services were business-critical and required 24/7 support, they had to meet stringent reliability and quality standards. To achieve this, the team focused on reducing manual testing and expanding automated test coverage, including targeted integration tests.

Verisure

Senior Software Engineer

Aug 2021 - Aug 2022

Mikael worked in the Platform Foundation team which supports Verisure developers with services and libraries to simplify everyday life and provide an increased developer experience. This included maintenance of existing code base, but also extend and develop new features. For example, implement support of multiple data sources and transaction support in a Spring Boot database library. The role also included analyzing and present solutions for a number of services supporting new business functionality.

Resurs Bank

Senior Software Engineer and Lead Developer

Feb 2014 - Jul 2021

Mikael worked as a Senior Software Engineer and Lead Developer in the Consumer Loan team. The responsibilities as a Lead Developer was to lead the technical discussions within the team and have an active role in cross-teams forums. The role also included mentorship of junior developers and facilitate technical interviews in the recruitment process. The role as a Solution Architect was to understand and take part in the business discussions and technical requirements for the Consumer Loan domain. And from the result of these discussions; design and model new services and applications.

Overall the Consumer Loan team had the responsibility of all the web applications and services within the consumer loan domain and in addition to this, the team also had responsibility of services and libraries connecting the Java-layer with the core banking system. The applications and services was used both internally and externally by the bank's customers, which required a high level of operational reliability and quality. The emphasis of the development was done in Java and Spring Boot. To ensure code quality, code reviews, static code analyzes and unit tests are used.

Sony

System Developer

Sept 2012 - Jan 2014

As a consultant at Sony, the daily work involved bug fixes and maintenance in the Android Framework. This included everything from graphic widgets to installation managers and window/activity management.

Great emphasis was placed on analysis and investigation. Code corrections were made in both Android layer as well in the native layers. The majority of these fixes are also sent to Google to increase quality and reduce maintenance work on the next Android version.

Cege Teknik

System Developer

Jan 1993 - Aug 2003

System development and integration between Windows systems and industrial embedded systems. In my role as a system developer, I had total responsibility for the entire software development, from requirements work to final approval of the customer. Because the majority of the systems were exported, I usually participated in the installation and commissioning of the systems in both Europe and the United States.
