

Fredrik Norrman

/ Senior Software & AI Engineer

Software developer and consultant with strong technical curiosity and a preference for owning problems end to end, from understanding customer needs and investigating the system through implementation, verification, deployment and operation. My background is primarily C#/.NET and enterprise integrations, but I am comfortable working across the stack and learning whatever is needed to solve the problem.

I am a genuine AI enthusiast, and AI has become a central part of how I build software. My current workflow is AI-first: I use OpenCode CLI and OpenChamber to run goal-driven coding loops for investigation, implementation, testing, adversarial review and verification, and experimenting with n8n to automate my workflow even more. I continuously refine prompts, model selection and validation to push current models close to their limits without giving up engineering judgment.

/ Highlighted assignments

Senior Software & AI Engineer

Omegapoint

Aug 2023 - Dec 2026

Develop and maintain complex backend integration flows for large-scale enterprise data processing, with end-to-end ownership from investigation and architecture to production deployment. Apply an AI-first approach to day-to-day development, using coding agents through OpenCode CLI and OpenChamber for investigation, implementation, testing, adversarial review and verification. Build and continuously improve agentic workflows for development, including goal-driven execution, automated quality gates, evidence-based verification and n8n-based automation. Continuously experiment at the edge of what current AI models can handle, refining prompts, model selection and workflows while keeping human judgment as the final quality gate. Own the full software lifecycle, from understanding customer needs and system constraints through implementation, deployment and production verification.

Software Engineer

Aliquam Consulting, Lund

Jan 2021 - Jul 2023

Developed extensions and reports for work order systems, working directly with customers and taking features from idea to deployment. Worked across backend and frontend development. Took responsibility for the full delivery chain, from requirements and implementation to deployment of completed functionality.

Software

C#/.NET
TypeScript
NodeJS
SQL

AI

OpenCode CLI,
OpenChamber
n8n
Multi-agent Orchestration
Model Routing
Agentic coding workflows

Other

Linux
Docker
Kubernetes
Git
Ci/CD
Azure
Backend Integrations
MongoDB
REST APIs

/ Relevant projects and assignments
