

Nina Kristensson

/ Senior Software Engineer

Senior Data Engineer & Architect with 10+ years of experience building scalable data platforms in cloud and hybrid environments. Skilled in data modeling, ETL development, and architecture modernization using Azure Data Factory, SQL Server, MySQL, Kafka, and Azure Functions. Led cloud migration and PoC efforts at E.ON, integrating microservices with automated pipelines for analytics. Experienced in distributed systems and event-driven architectures, optimizing both relational and NoSQL models. Strong in evaluating technology trade-offs, as shown at Human IT and JP Morgan supporting hybrid setups, compliance, and performance tuning. Also experienced in stakeholder alignment, PoCs, and KPI visualization using Power BI and Tableau, with early work in graph modeling using Neo4j.

/ Highlighted assignments

Lead Engineer

E.ON

Mar 2024 - Ongoing

At E.ON, Nina leads the migration to a modern Azure-based platform, building scalable ETL pipelines, automating data flows with Azure Functions, and shaping target architecture—boosting reliability, developer productivity, and cloud cost-efficiency across teams..

Senior Engineer

Ikano Bank

Jun 2021 - Feb 2024

At Ikano, Nina worked as a Senior Consultant from June 2021 to February 2024, delivering full-stack and data engineering solutions within a regulated financial environment. She developed Java-based microservices integrated with MariaDB and AWS to support secure, high-performance backend systems.

Techniques

Azure Data Factory
 Pentaho
 Informatica Power Center
 ETL
 Batch & Stream Processing
 Data Quality
 SQL
 MySQL/MariaDB
 Oracle PL/SQL
 Cassandra
 MongoDB
 Neo4j
 Data Modelling & Database Design
 Event Driven Architecture
 Microsoft Azure
 Google Cloud Platform
 Amazon Web Service (AWS)
 Kubernetes
 T-SQL
 Java
 Apache Kafka
 Tableau
 Power BI

/ Relevant projects and assignments

E.ON

Lead Engineer/Architect

Mar 2024 - Ongoing

Nina is currently working on a major cloud migration project focused on modernizing a large-scale production system. Her work includes designing and developing microservices in a Microsoft Azure environment using C# and Azure Functions. She has contributed to the architecture of a message-driven ecosystem, leveraging Azure Service Bus to coordinate services across domains such as booking systems, vehicle telematics, traffic planning, and financial transactions. Nina is also involved in selecting and integrating ETL tools, with Azure Data Factory as a core component. In addition to backend development, she collaborates closely with system architects and stakeholders to ensure that design decisions align with broader platform goals.

Database, MySQL, SQL, Java, SQL Server, Microsoft Architecture, PL/SQL, C#, Microsoft Azure, Azure Functions, Azure Data Factory, MariaDB, ETL, Data Warehouse Architecture, Cloud Migrations, Stakeholder Management, Kubernetes, Terraform, Agile, GitHub

Ikano Bank

Senior Engineer

Jun 2021 - Feb 2024

At Ikano, Nina worked as a Senior Consultant from June 2021 to February 2024, delivering full-stack and data engineering solutions within a regulated financial environment. She developed Java-based microservices integrated with MariaDB and AWS to support secure, high-performance backend systems. Her responsibilities included improving data structures and enhancing query performance through data modeling and performance tuning. Nina also collaborated with business analysts and compliance teams to ensure data handling aligned with financial regulations. As part of an agile team, she contributed to process improvements that increased development efficiency and data quality across the platform.

Java Development, Agile, AWS, MariaDB, Data collection, Financial Services, Data Modelling, Process Improvements, Data modelling, Database design, SAFe, Microservice Architecture

Human IT

Senior Java & Data Engineer

Feb 2018 - May 2021

At Human IT Consulting, Nina held a dual role as Business Unit Manager and Senior Data Engineer from February 2018 to May 2021. She was responsible for both stakeholder engagement and technical delivery, with a key project involving the design and implementation of a royalty distribution platform. This greenfield system was built using SQL Server in a cloud-based environment, where she created the full data model, schema definitions, and stored procedures to manage complex financial rules. Nina also supported compliance and documentation efforts, ensuring that system behavior aligned with regulatory requirements. In addition to hands-on engineering, she participated in pre-sales discussions, mentored junior developers, and facilitated handovers to client teams.

Java, Distributed computing, GCP, Apache Kafka, Oracle PL/SQL, Pentaho, Data Engineering, Solution Architecture, Distributed Systems Architecture

JP Morgan

Software & Data Engineer

Oct 2007 - Jun 2019

The overlap in assignment is the fact that she kept working as a consultant for JP Morgan after she started at Human IT. At JP Morgan Chase, Nina held various roles between 2007 and 2018, contributing to several high-impact data initiatives across the organization. As a senior Oracle database developer for a 24/7 interbank system, she was responsible for designing data models, building aggregator tables, developing stored procedures, and implementing triggers to support core transactional workflows. She later joined the firmwide engineering group, where she helped establish database performance standards and advised teams on SQL quality and optimization. Nina also worked on log aggregation systems combining Cassandra and Oracle, as well as ETL pipelines across issue tracking platforms. In the Human Resources Technology division, she contributed to data warehouse development, BI dashboards in Tableau and Power BI, and early research into graph databases (Neo4j) for modeling staff movement patterns.

ETL, Design Patterns, CI/CD, Solution Architecture, Distributed computing, Data collection, Tableau, Data Analytics, Python Agile, Data modelling, Data engineering, ETL Tools, Java
