

Alexander Munckafrosenschöld

/ Senior Software Engineer

Alexander is a driven senior software engineer frontend-focused who designs and builds user-centered, minimalist web experiences. He takes initiative, proposes improvements and engages stakeholders to drive practical prototypes toward production. Experienced mentor and tutor, he supports teams and juniors while keeping current with modern stacks such as TypeScript and React. Committed to accessibility, component-based design and continuous learning to deliver reliable, maintainable interfaces.

/ Highlighted assignments

Senior Software Engineer

Sony

Feb 2026 - Ongoing

Alexander is responsible for maintaining and rebuilding an admin UI for Sony that manages device and software updates. He is leading a major overhaul, removing legacy libraries such as Bootstrap and Material-UI and migrating the UI to Tailwind CSS and SpartanUI. This work also includes converting template-driven forms to signal-driven forms and improving the app's usability.

Senior Software Engineer

IKEA

Nov 2021 - Dec 2023

Led frontend rebuild of IKEA's planner using an internal component library from concept to delivery. Built accessible, production-ready React/TypeScript interfaces using hooks, Context API and Suspense; authored Jest unit tests and conducted code reviews. Collaborated via pair and mob programming, integrated AWS Lambda and serverless microservices. Worked in Scrum, prioritizing tasks to meet goals

Sony

Senior Software Engineer

Feb 2026 - Ongoing

Alexander is responsible for maintaining and rebuilding an admin UI for Sony that manages device and software updates. He is leading a major overhaul, removing legacy libraries such as Bootstrap and Material-UI and migrating the UI to Tailwind CSS and SpartanUI. This work also includes converting template-driven forms to signal-driven forms and improving the app's usability.

Node.js, TypeScript, Tailwind CSS, Angular 21

IKEA

Senior Software Engineer

Jan 2025 - Feb 2026

Alexander is responsible for managing and updating different planner configurations used on the IKEA website, such as the content-page, PIP, and PLP. Where new markets can create/edit new planners, and display fragments on the IKEA website to help the customers navigate to the correct planner for a product. I was responsible for both rebuilding and adding new features to the planner configurator, to make the user journey easier for people managing planners and translations.

Eriks Fönsterputs

Senior Software Engineer

Oct 2024 - Dec 2024

Alexander is responsible for helping Eriks Fönsterputs which is used to book window cleaning appointments and to update their current app into version 2, by rebuilding the ui, and adding new functionalities. The work consists mainly of React, Typescript, styled-components, working with a figma design and applying that to the web.

TypeScript, Styled-components, Figma, React

Transdev

Senior Software Engineer

Jan 2024 - Oct 2024

Alexander was responsible for helping transdev refactor and update their app to the latest standard which is used to manage bus and taxidriver and later on train drivers. The work involved needed for this was to update their css libraries to styled-component, using new react principles, setting up a ci/cd pipeline as well doing some minor C# work.

CSS, C#, Continuous Integration, React, Vite

God Service

Developer

Jan 2024 - Jun 2024

Developing and maintaining our clients web application called Time which is a platform for time management. It simplifies the Supervisors work to schedule the employees appointments, attest and reports. It exports and imports data from Visma's systems, as Invoices and Salary.

C#, Microsoft SQL Server, AngularJS, .NET 5.0, Asp .Net Core razor Pages

IKEA

Frontend developer

Nov 2021 - Dec 2023

Alexander worked within a team responsible for the frontend development of a planner tool on the IKEA website. During his tenure, their most significant accomplishment was the complete reconstruction of the website using an internal component library. This involved hands-on development from the initial stages to the final product, utilizing contemporary React principles and placing a strong emphasis on adherence to web accessibility standards.

Additionally, it's worth mentioning that they incorporated TypeScript, implemented Jest testing, and employed AWS Lambdas for backend validation during the project.

In my daily tasks, I employed Typescript to construct React components, applied modern React principles like hooks, Context, and Suspense, and utilized Jest to write unit tests with a goal of achieving 100% coverage. I actively participated in code reviews and engaged in pair and mob programming. Operating within the SCRUM business framework, I am accustomed to working within sprints, conducting planning sessions, retrospectives, and managing time effectively.

Additionally, I possess experience in working with AWS and the Serverless framework, specifically in setting up microservices.

Amazon Web Services, Node.js, Jest, Accessibility, TypeScript, Serverless, Styled-components, React, Vite

IKEA / INGKA

Frontend developer

Apr 2019 - Nov 2021

Alexander collaborated within an agile team, focusing primarily on the Kitchen Planner Booking Service. Additionally, he contributed to various applications, including the Spare Parts app, designed to assist customers in ordering missing components for their IKEA furniture. The technological stack involved React, JavaScript (ES6), HTML, Styled-components, and the IKEA Design Library for developing both the Spare Parts app and the Kitchen Planner Booking Tool. Deployment of functions was facilitated through Google Cloud services.

Jest, Google Cloud Platform/GCP, Styled-components, React

Trialbee

Frontend developer

Nov 2017 - Aug 2019

Within an agile team, the mission was to create applications dedicated to streamlining clinical trials, with a specific emphasis on assisting individuals in signing up swiftly. The goal was to expedite the overall clinical trial process, providing people with the opportunity to explore new medical interventions. The technology stack for these initiatives included WordPress, Ruby on Rails, React, JavaScript (ES6), HTML, and styled-components for frontend application development.

Databases, WordPress, HTTP, ES6, React, Graph

Carefoundry GMHB

Web developer mentor

Oct 2016 - Oct 2018

Alexander's journey with CareerFoundry began as a student in a six-month course. Remarkably, within three months of completing the program, he transitioned into a teaching role for subsequent students undertaking the same course. Throughout this educational journey, he acquired proficiency in Ruby on Rails, React, JavaScript, CSS, and deployment using Heroku.

In his teaching role, Alexander continued to leverage similar technology stacks, with a heightened emphasis on web development technologies such as React, JavaScript, unit testing, HTML, and CSS.

JavaScript, MongoDB, Deployment, Ruby on Rails, Jekyll, React

Wayne Fueling Systems Sweden AB

Fuel dispenser tester

Oct 2012 - Nov 2017

Responsible for testing fuel dispensers, calibrate them, and check that the pump is functional for our clients.

Sponsorhjälpen

Web Designer Internship

Jan 2015 - May 2015

As a frontend developer, Alexander's role involved working with WordPress, where he utilized HTML, SASS, and JavaScript.

During his time at Sponsorhjälpen, the emphasis was on creating WordPress sites for local clients. The projects entailed the use of HTML, CSS, and some JavaScript, although he wasn't an expert in WordPress but effectively incorporated it into our development process.

HTML, JavaScript, WordPress, SASS

Modifinder

Web Designer Internship

Jul 2014 - Oct 2014

As a frontend developer, Alexander specialized in constructing websites tailored for local clients, with a keen focus on SEO. He crafted compact sites utilizing Bootstrap, HTML, and SASS.

During his initial internship at Modifinder, his responsibilities included the development of small-scale websites for local customers. The technology stack for these projects comprised Bootstrap, HTML, and Sass.

HTML, SASS, Bootstrap

Casablanca Advertising

Web Designer

Jan 2009 - Mar 2009

During a 2-month internship, my primary focus involved utilizing Illustrator and Photoshop while also coding a website for the organization.

At Casablanca Design Studio, I embarked on an internship journey where I self-taught HTML and CSS. Additionally, I had the opportunity to collaborate with Photoshop and Illustrator, assisting in the creation of a mock website and contributing to various design projects.
