

Fredrik Wigårde

/ Senior Software Engineer

Fredrik is a senior software engineer and integration developer with more than 12 years of experience building and maintaining business-critical systems. His core expertise includes Java, C#/.NET, REST APIs, message-based integrations and relational databases. He develops payment and reconciliation solutions processing millions of transactions, and has extensive experience in large-scale data processing, database migration, ERP, e-commerce and POS systems.

/ Highlighted assignments

Senior Software Engineer - Java Developer

Svenska Handelsbanken AB

Dec 2024 - Nov 2026

Develops bank-critical payment and reconciliation solutions that process millions of transactions. Work includes standards-based XML payment flows, asynchronous messaging, transaction matching and integration with core banking systems.

Senior Software Engineer with DevOps Responsibility

Telavox AB

Feb 2023 - Oct 2024

Developed the Business Support System and GDPR-related processing of hundreds of millions of records. Led a platform-wide UTF-8 migration and contributed to REST APIs, automated testing and GitOps deployments.

Techniques

Java / Java EE
C# / .NET
REST API / SOAP
System Integration
Payment Processing
Asynchronous Messaging

Tools

Git / Jenkins
TeamCity
Postman
IntelliJ
Visual Studio

Products/Platform

PostgreSQL / MySQL
SQL Server
Docker / Kubernetes
RabbitMQ
Pyramid ERP

/ Relevant projects and assignments

Svenska Handelsbanken AB

Senior Software Engineer Java

Dec 2024 - Nov 2026

Fredrik works with the development and maintenance of business-critical banking systems, with a primary focus on payment processing and financial reconciliation. He contributes to the development of Handelsbanken's new reconciliation system, which supports several new transaction flows initiated by Bankgirot and requirements originating from EU directives. The system processes files containing millions of transactions and reconciles the data against multiple sources to identify discrepancies and ensure accurate transaction handling.

Fredrik has also developed a new payment flow for Handelsbanken's Norwegian customers. The solution generates XML files according to an international ISO standard and transfers them through an MQ-based integration to the core banking platform in Norway. It also processes asynchronous responses and ensures that databases and connected systems are updated with the correct transaction status. In addition to these initiatives, Fredrik contributes to the continued development, maintenance and unit testing of other business-critical banking applications.

Key areas: Backend development, payment processing, financial reconciliation, high-volume transaction processing, system integration, asynchronous messaging, XML-based data exchange and unit testing.

Java, Git, TeamCity, JPA, Apache Camel, System Integration, Unit testing, Kibana, Backend Development, REST API, Swagger, Message Queues, PostgreSQL, Open API, XML, Postman API, Payment processing, Java EE Development, Asynchronous messaging, Financial reconciliation, High Transaction Volume Systems, Open API/Swagger, Java EE/Open Liberty

Telavox AB

Senior Software Engineer with DevOps Responsibility

Feb 2023 - Oct 2024

Fredrik worked with the development and delivery of Telavox's Business Support System, a central platform supporting the company's business and operational processes. He developed functionality across several application layers, from database and backend logic to web-based functionality, primarily using Java, Hibernate and MySQL.

Fredrik developed scheduled data-processing jobs capable of handling hundreds of millions of database records to support GDPR-related requirements. The solution was developed in Java and MySQL and prepared for asynchronous processing through RabbitMQ. As lead developer for the platform-wide migration from ISO-8859-1 to UTF-8, Fredrik analysed hundreds of database tables to identify compatibility risks, dependencies and potential migration issues. The initiative enabled support for additional languages and international markets. During the migration, he used Percona Toolkit and MySQL to analyse the database environment and monitor replication, system load and other operational risks.

He also developed REST API endpoints supporting automated customer migrations and used Postman for validation and execution. His responsibilities further included general application development, unit testing, defect resolution and maintenance. Fredrik also contributed to automated testing and deployment processes using Jenkins, Git and GitOps, with applications deployed in Docker and Kubernetes environments.

Key areas: Backend development, BSS, large-scale data processing, GDPR, database migration, internationalization, REST APIs, CI/CD, GitOps and containerized deployment.

MySQL 5.7, Java, Jenkins, REST, CI/CD, RabbitMQ, Docker, Database Migration, Postman, REST API, Stripe, Kubernetes, Jenkins/Hudson, GDPR Compliance, Hibernate, IntelliJ, Postman API, Backend testing

Vitec Unikum Datasystem AB

Backend Developer & Integration Specialist

Sept 2014 - Jan 2023

Fredrik spent more than eight years developing business-critical functionality within the Pyramid ERP ecosystem. During his first four years, he primarily worked with backend development for the Pyramid ERP platform using BETA, an internal programming language with similarities to C. He was subsequently internally recruited to the company's e-commerce department, where he continued to specialize in backend development and system integration.

Fredrik developed and maintained an e-commerce platform using C# and JavaScript, integrated with both MySQL and Microsoft SQL Server. He implemented integrations with external payment and technology providers, including Klarna, Nets and Elasticsearch.

He developed the communication layer between the e-commerce platform and the Pyramid ERP system using web services, SOAP and XML. He also developed COM components supporting back-office functionality and

payment-related workflows for Klarna and Nets.

Fredrik held the primary technical responsibility for the company's POS solution, which he developed and maintained using C# and BETA. He also developed central ERP functionality for multi-warehouse management, storage locations, serial-number handling and retail chains.

The role gave Fredrik extensive experience in backend development, ERP integration, payment integrations, e-commerce, POS and data-intensive business systems.

Key areas: Backend development, ERP, e-commerce, payment integrations, POS, inventory management, system integration and database development.

Business System, Pyramid, MySQL 5.7, JavaScript, SOAP, Web Services, Java, C#, Microsoft SQL Server, C, System Integration, Microsoft Visual Studio, POS, Point of Sale, Elasticsearch, Backend Development, Integration specialist PBS, ERP Integration, Database development, C++, XML, BETA, Payment Integration, E-commerce Development

/ Skills

Level 5 – Expert

ASP.NET, Backend Development, BETA, C#, Database development, Elasticsearch, Hibernate, Integration specialist PBS, Java, Java EE Development, Java EE/Open Liberty, Microsoft Visual Studio, MySQL 5.7, Open API/Swagger, Payment Integration, Pyramid, REST, SOAP, System Integration, Team Foundation Server, XML

Level 4 - Advanced

Asynchronous messaging, Business System, C, CI/CD, CI/CD Jenkins, Database Migration, E-commerce Development, ERP Integration, Financial reconciliation, GDPR Compliance, Git, High Transaction Volume Systems, IntelliJ, JPA, JSON, Kibana, Message Queues, Microsoft SQL Server, Payment processing, POS, PostgreSQL, Postman, Postman API, REST API, SQL, Stripe, Swagger, TeamCity, Backend testing, Unit testing

Level 3 – High Competence

Apache Camel, C++, CSS, Docker, HTML, JavaScript, Jenkins, Jenkins/Hudson, Kubernetes, Open API, Point of Sale, Web Services

Level 2 - Intermediate

RabbitMQ

Level 1– Novice

COBOL

/ Past employments

Castra Syd

Feb 2023 - Ongoing

Vitec Unikum Datasystem AB

Sept 2014 - Jan 2023

/ Education

Game Development BSc

2011 - 2014

/ Courses & Certifications

Game Developer
Malmö University, Malmö

2014

/ Language skills

Swedish

Native or bilingual proficiency

English

Full professional proficiency
