

Joel Hagenblad

/ Senior Software Engineer

Senior Software Engineer with proven experience delivering high-quality frontend transformations for complex CMS environments. Successfully rebuilt a CMS frontend using Vue.js, TypeScript, JavaScript, HTML, and CSS on Microsoft Azure, taking ownership of implementation, troubleshooting, and performance optimisation. A collaborative and commercially minded problem-solver who drives issues through to resolution and delivers intuitive, user-focused digital experiences. Continuously expands his expertise in React and Google Cloud Platform to bring modern technologies and added value to future projects.

/ Highlighted assignments

IKEA

Senior Software Engineer

2021 - 2026

Joel was Senior Software Engineer on the frontend team for the IKEA Kitchen Planner. He delivered and evolved apps used in 60+ countries: a customer React app, internal/external Node.js APIs (serverless AWS), and supporting infrastructure. He planned and prioritised work, monitored delivery, ensured alignment, and improved observability with CloudWatch and Sentry.

CDON.COM

Senior Software Engineer

2019 - 2021

CDON Connect is a platform for merchants to manage products, orders and other tasks. My responsibilities in the team was to write and maintain code for the client-side part of the application. The application was an ASP.NET Core web app hosted in a Microsoft Azure environment. Technologies used for the frontend of this project was: Vue.js, TypeScript, Sass and Webpack.

IKEA

Senior Software Engineer

Nov 2021 - Feb 2026

Joel worked as a Senior Software Engineer within the frontend team responsible for the IKEA Kitchen Planner. He contributed to the delivery and strategic development of several applications supporting the IKEA Kitchen Planner across more than 60 countries. The solution landscape included a customer-facing React application, internal and external Node.js APIs based on a serverless AWS architecture, and the supporting digital infrastructure.

Joel planned and prioritised the team's activities, monitored delivery, and ensured alignment with project objectives. He also enhanced application observability through the implementation of AWS CloudWatch and Sentry.

Axis

Senior Software Engineer

May 2021 - Nov 2021

Senior Software Engineer in the fronted team for Application Development. Project involvements listed below:

Project pricing tool

A web application aiming to assist Axis customers with registering projects of a larger scale to help facilitate the best and most favorable deals in line with their project specifics. I'm working on the client side part for both the latest and upcoming versions of this application. Both applications are written in React, with TypeScript and the Material UI component library added for the upcoming version.

MyAxis.com

A small web application for Axis users/customers to visit to receive a quick overview of their products, service cases, system statuses etc. This app was initiated to become more data driven as well as offer a convenient solution for customer to overview information that is relevant for them.

I work on the client side of the web app, which was developed in React.

God Service Sverige AB

Senior Software Engineer

Apr 2021 - May 2021

Knowit developed Time, a workforce management platform for Customer God Service. The platform streamlined scheduling, appointments, approvals, and reporting, simplifying supervisors' daily work. Automated payroll and invoicing exports to Visma further reduced administration.

The solution combined a C# backend with React and Angular frontends.

AngularJS

CDON Connect

CDON Connect is a platform for merchants (companies selling on CDON Marketplace) to manage products, orders and other tasks. My responsibilities in the team was to write and maintain code for the client-side part of the application. The application was an ASP.NET Core web app hosted in a Microsoft Azure environment. Technologies used for the frontend of this project was: Vue.js, TypeScript, Sass and Webpack.

Category Tool

For this project we built a web application for inside company use that would allow for administration of the many product categories and their various attributes used on CDON Marketplace. I was responsible for the frontend part of the application. This application was also an ASP.NET Core web app, and technologies used for the frontend development was: Vue.js, TypeScript, Sass and Webpack.

Both projects used agile methods such as Scrum or Kanban.

CDON.COM

Merchant Integration Specialist

Jul 2018 - Jan 2019

CDON.COM is a marketplace with approximately 1,500 external companies selling products on our site. My responsibility was to help both new and existing companies with their integration with our system. This included a lot of contact with the companies and our integration partners, as well as a lot of internal contact with our development department. My main tasks were:

- Support new customers to upload articles on to our site.
- Support existing merchants to troubleshoot the XML files they send to us for data management.
- Develop and improve the functions for integration together with our IT department.
- Frontend development.

CDON.COM

Customer Service Agent

Sept 2017 - Jun 2018

- Answering customers' questions via email, chat and phone.
- Direct contact with external suppliers who sell their products on the website.
- Train new employees.
- Responsible for the contact with our corporate customers, which included quotation handling.
