

Jonas Schödin

/ Senior Software Engineer

Jonas is a senior software engineer specialised in C#/.NET with extensive backend, data integration, and database-driven solution experience. He has worked with Microsoft technologies throughout his career and is skilled in C#, .NET, SQL, and Azure. Jonas has built integrations across CRM, customer profiles, loyalty, customer service, and payment systems, analyzing data structures, implementing reliable data flows, and ensuring data quality via validation, error handling, and automated testing. His background in system migration, API development, and complex data processing suits him for data migration and CRM transformation projects. He is a structured, analytical team player who collaborates effectively with developers, architects, stakeholders, and business representatives.

/ Highlighted assignments

Inter IKEA PP

Senior Software Engineer

2025 - 2026

Contributed to IKEA's Profile Pages (PP) platform's international growth and maintenance, optimizing REST APIs with Clean Architecture, enhancing multi-provider authentication, and integrating internal/external systems. Improved workflows with Azure Service Bus, bolstered resilience using Polly, upgraded databases, and supported testing strategies with NUnit/Moq frameworks.

Inter IKEA Shoppable App

Senior Software Engineer

2021 - 2022

Jonas worked as a senior software engineer on a team that built a shoppable mobile app for multiple global markets. The app supports multiple languages and integrates country-specific backends to deliver localized content. It uses a server-driven UI, with the entire interface and UI flow defined by the backend and rendered by native Swift and Kotlin clients via .NET Core APIs.

/ Relevant projects and assignments

Inter IKEA PP

Senior Software Engineer

Aug 2025 - Apr 2026

Contributed to the evolution and market expansion of Profile Pages (PP) — IKEA's internal customer profile management platform serving multiple international markets. Worked in a maintenance and growth phase, extending functionality and adapting the platform for new regional rollouts.

- * Extended and enhanced a REST API built with Clean Architecture and domain-driven design
- * Maintained and evolved multi-provider authentication (Auth0, ICAPS/IRW) enabling secure cross-market identity management
- * Managed and enhanced integrations with multiple internal and external systems (CRM; CMD, Loyalty, Customer Service, Payment) using the Gateway pattern
- * Developed and refined event-driven workflows with Azure Service Bus for asynchronous processing
- * Enabled new market onboarding through multi-tenancy design and feature flag configurations
- * Improved system resilience using Polly (retry policies, circuit breakers)
- * Strengthened validation, error handling, and observability (FluentValidation, ErrorOr, Application Insights)
- * Maintained and evolved persistence layer using MongoDB/Cosmos DB
- * Contributed to automated testing strategy with NUnit and Moq

Transdev

Senior Software Engineer

Jan 2024 - Aug 2025

For the customer Transdev, Jonas served as the lead backend developer in a project aimed at integrating and combining two distinct .NET/C# applications, optimizing functionality, and ensuring seamless interoperability. Jonas played a significant role in rewriting the backend, upgrading the frameworks to the latest technology, and enhancing performance.

Senior Software Engineer KIA

Jul 2023 - Jan 2024

Jonas was a part of the team as a senior software engineer that created the Service Bus nuget within the KIA project, this nuget extends a lot of the Azure Service Bus functionality with for example fine grained and flexible retry mechanisms (i.e. above and beyond what Azure Service Bus offers).

KIA also includes a nuget for Keyvault, emailservice and Azure AD.

It is under heavy development and there will be more functionality/nugets added as time goes on.

Everything is hosted in github and github actions is used for CI/CD pipeline.

We also use infrastructure as code and everything is set up using Bicep to be able to easily reproduce an environment.

Inter IKEA Shoppable App

Senior Software Engineer

Oct 2021 - May 2022

Jonas worked as a senior software engineer on a team that built a shoppable mobile app for multiple global markets. The app supports multiple languages and integrates country-specific backends to deliver localized content. It uses a server-driven UI, with the entire interface and UI flow defined by the backend and rendered by native Swift and Kotlin clients via .NET Core APIs.

Work style: Agile methodology, daily scrums & 3 week sprints using Jira dashboards.

Inter IKEA Checkout

Senior Software Engineer

Apr 2019 - Oct 2021

Jonas was a senior software engineer in an e-commerce project where Knowit is responsible for delivering a Cart & Checkout solution to all IKEA's retailers around the world. The product handles API-integration towards ERP-system, warehouse, payment methods and product information system. Every market has its own standardized services to inform of warehouse pick-up points, delivery methods and payment methods.

Frontend in React/Node.js that communicates with the .NET Core APIs built in the Backend. Much of the logic is handled in the Backend and there is a vast number of APIs handling contracts from the ERP.

Sony

System Developer

Jan 2016 - Mar 2019

Part of building an Angular GUI message que system. A project for migrating internal systems and applications from on-prem to AWS. Jenkins/Gerrit was also transferred to AWS. Angular Web clients in combination with Windows Services in the Backend.

C# MongoDB Angular 7 .NET Core 2.2

Dabas

System Backend Developer

Mar 2007 - Jan 2016

Development of a system for handling communication and article information. It consists of a complex set of rules managing the article information. The system sends and imports EDI messages to/from other expert systems.

ASP.NET C# Microsoft SQL Server Entity Framework .net

WM-Data

Software Engineer

Jan 2004 - Feb 2007

Consultant assignments in Sweden and Denmark mainly as a system architect and developer, primarily using Microsoft technologies building both back-end and front-end applications.

To mention a few other experiences I also worked in the role as project manager for smaller projects, database modelling in Oracle and secure communication using different protocols.

Oracle C# Microsoft SQL Server

ABB

System Engineer

Feb 1999 - Dec 2003

System developer primarily using ADA95, Uniface and Java with Oracle databases.

- Oracle
- ADATest95

/ Past employments

Knowit	Nov 2013 - Ongoing
Infodata Applicate AB	Jul 2007 - Jan 2013
Bisnode Information AB	Jan 2007 - Nov 2007
WM-Data	Mar 2003 - Jan 2007
