

Leonard Bentmar-Holgersson

/ Senior Software Engineer

Leonard is a Senior Software Engineer with extensive experience from large, business-critical environments such as IKEA and Skatteverket. He specializes in React and TypeScript, with fullstack capability in Node.js and Java (Spring Boot), and is comfortable working across the entire development lifecycle in modern CI/CD and DevOps setups.

He has contributed to e-commerce platforms, internal developer platforms, and shared component libraries used across multiple markets and teams. Accessibility and quality are consistent priorities in his work, and he has actively driven WCAG compliance and inclusive design improvements.

Leonard brings a structured, solution-oriented approach and thrives in technically complex environments where robust, scalable, and user-friendly systems are essential.

/ Highlighted assignments

Senior Software Engineer

Inter IKEA

Oct 2024 - Feb 2026

As a senior software engineer, I helped develop a SaaS e-com platform for IKEA franchisees in 18 markets, using TypeScript and React on the frontend and .NET with SQL and NoSQL on the backend. I focused on frontend delivery, third-party and payment integrations, and accessibility. I also supported releases, joined a rotating 24/7 on-call schedule, and led incident investigations and resolution.

Senior Software Engineer

Skatteverket

Apr 2023 - Sept 2024

Worked as a senior software engineer in one of Skatteverket's SAFE trains, building shared services that simplified development for teams across Skatteverket and other authorities. Initially focused on JavaScript, React and Node.js for frontend work, then expanded into backend development with Java and Spring Boot. Improved testing and maintainability while driving accessibility and inclusive

/ Relevant projects and assignments

Nederman

Senior Software Engineer

May 2026 - Ongoing

Building a monitoring platform for air filter systems, with an Angular frontend and a Rust backend. A lot of focus on getting proper E2E test coverage, as well as stability and performance improvements.

Bitbucket, Docker, Atlassian Jira, Angular, Rust, E2E

Inter IKEA

Senior Software Engineer

Oct 2024 - Feb 2026

As a senior software engineer, I helped develop a SaaS e-com platform for IKEA franchisees in 18 markets, using TypeScript and React on the frontend and .NET with SQL and NoSQL on the backend.

Focused primarily on frontend development, integrating third-party systems and payment providers, while ensuring all products complied with accessibility standards. Worked closely with cross-functional teams to improve the platform's functionality. Managed production release rollouts and participated in a rotating 24/7 on-call schedule to handle incident response, leading investigations and resolutions of production issues to maintain platform reliability across multiple markets.

Skatteverket

Senior Software Engineer

Apr 2023 - Sept 2024

Worked as a senior software engineer in one of Skatteverket's SAFe trains. Built services that simplified development for other teams within Skatteverket and other authorities.

Initially worked primarily as a JavaScript developer (React and Node.js) with a frontend focus, and later also contributed to backend development using Java with Spring Boot.

Contributed to improving test strategies and practices, supporting teams in building more robust and maintainable services.

Drove and contributed to accessibility improvements, ensuring compliance and promoting inclusive design practices across services and teams.

JavaScript, SOAP, Spring, Agile Methods, Test automation, SQL, Java, Jenkins, CI/CD, GitHub, DevOps, Accessibility, SAFe, Spring Batch, TypeScript, WCAG, React.js, Storybook

Inter IKEA

Senior Software Engineer

Nov 2021 - Jan 2023

Developed web components and services for planning tools, enhancing system functionality and usability while emphasizing performance, maintainability, and overall quality.

Spearheaded accessibility initiatives within the project, ensuring compliance with WCAG standards and significantly improving platform usability.

Contributed across both backend and frontend development, with responsibility for CI/CD pipelines, build configuration, environment setup, and close collaboration with operations to streamline deployments and improve release stability.

JavaScript, Git, REST, GitHub, Power BI, Jest, Accessibility, TypeScript, WCAG, Python, Web Components, Figma, Agile/ scrum, React.js, GitHub Actions

IKEA

Software Engineer

Mar 2018 - Nov 2021

Primarily developed component libraries for IKEA's planning tools, with a focus on implementing and maintaining testing processes across multiple agile development teams. Responsibilities spanned both exploratory testing and structured test case execution.

Key responsibilities included:

- Creating tools to streamline data validation processes

- Conducting acceptance and contract testing for external APIs
- Performing automated browser testing and assessing various test frameworks
- Overseeing and managing Jenkins pipelines

JavaScript, Test automation, Java, Jenkins, Git, Selenium, Atlassian Jira, Web testing, Python, API Testing

Verisure

Tool Developer

Apr 2018 - Jul 2018

Developed and maintained testing tools for Verisure's logistics department. The application was implemented using object-oriented Python and integrated with Navision via SOAP APIs. The database layer utilized a MySQL database to store test results and associated data.

SOAP, SQL, Subversion (SVN), Python

Volvo

Tester

Mar 2018 - Jun 2018

Executed scripted tests for Volvo's infotainment systems, with a primary focus on interoperability testing of the systems' Bluetooth implementation.

iOS, Android
