

Viktor Ekholm

/ Senior Software Engineer

Viktor is an experienced software engineer with over 10 years in the field and holds a Master of Science (MSc) in Computer Science and Engineering from Lunds Tekniska Högskola.

He has specializing in the development of large-scale, complex software solutions. With a strong emphasis on backend development, Viktor is deeply committed to solving technical challenges and delivering qualitative and maintainable systems.

Additionally, he is proficient across the fullstack and collaborate closely with cross-functional teams to create comprehensive, user-focused applications. His adaptability, technical expertise, and commitment to continuous improvement make him a valuable asset.

/ Highlighted assignments

Almi

Senior Software Engineer

2026 - Ongoing

Senior software engineer at Almi implementing features for an ASP.NET Blazor web app in Azure that lets customers apply for various loans and sign them digitally, and provides staff a UI to manage loans and archive signed documents. Also building a centralized API hub using Azure API Management and Bicep IaC to secure and unify communications across apps and sites.

iCore Solutions AB

Senior Software Engineer

2017 - 2025

Implemented multiple cloud-based services on top of an Integration Platform (iPaaS) solution, driving both architectural decisions and hands-on implementation. In this he was part of designing and building a number of microfrontends and backend microservices using modern technologies including ASP.NET Core, Blazor and occasionally Next.js/React.

Almi

Senior Software Engineer

Jan 2026 - Ongoing

Working as a senior software engineer for Almi implementing new features for an ASP.NET-based Blazor web application in Azure supporting Almi's business by giving their customers an easy way of applying for different type of loans and signing them digitally. Also provides Almi with simple UI for managing these loans and archiving the signed documents for future.

Implementing a new centralized hub for Almi's API's with the aim of having all their application flora and websites talk via this with large focus on security using Azure API Management (APIM) and IaC Bicep configuration to deploy and maintain for the future.

iCore Solutions AB

Senior Software Engineer

Aug 2017 - Dec 2025

Implemented multiple cloud-based services on top of an Integration Platform (iPaaS) solution, driving both architectural decisions and hands-on implementation. In this he was part of designing and building a number of microfrontends and backend microservices using modern technologies including ASP.NET Core, Blazor and occasionally Next.js/React.

Took ownership of infrastructure and deployment pipelines in Microsoft Azure, leveraging Docker, Bicep (Infrastructure as Code) and Azure DevOps to implement robust CI/CD workflows aligned with DevOps best practices.

Maintained and modernized the Integration Platforms SPA web interface built on ASP.NET MVC, playing a key role in the platform's migration to Azure by integrating essential features such as OpenID Connect for secure authentication.

Worked cross-functionally in agile, Scrum environments, collaborating closely with developers, UX designers and product owners to deliver scalable, maintainable, and user-focused software solutions.

Eurostep AB

Senior Software Engineer

Apr 2014 - Jul 2017

At Eurostep, he was responsible for delivering highly customized implementations of ASP.NET-based PLM product, ShareAspace, adapted to meet the unique needs of each client. Led client workshops and onsite requirement sessions, ensuring alignment between customer expectations and delivered features. The role involved translating client-specific domain models into PLM-based data architecture, developing system integrations, and implementing features for data import, export, and reporting. He also contributed to the development of a new version of ShareAspace, built using an early release of .NET Core.

4IT AB

Developer

Jun 2012 - Mar 2014

Developer of Business Intelligence solutions ranging from big data analytics to cloud-based platforms, He worked on the development and maintenance of web applications tailored for BI and HR use cases. His work involved using technologies such as C#, ASP.NET MVC, JavaScript, and jQuery to deliver scalable and maintainable solutions. The role also included direct customer interaction, including regular on-site visits, to gather requirements and ensure that the applications met client-specific needs.
